

INTERFLAM 2004

TABLE OF CONTENTS

Volume 1

	Page No.
<i>Preface</i>	iii
<i>Co-organising and Programme Committee</i>	iv
 KEYNOTE PAPER	
Fire research – Quo Vadamus? <i>Dougal Drysdale, University of Edinburgh, UK</i>	1
HARMONISATION	3
A new European system for fire testing and classification of cables <i>Björn Sundström, J Axelsson, P Van Hees, SP Fire Technology, Sweden</i>	5
Variation of testing conditions in single burning item tests <i>Anja Hofmann, Federal Institute for Materials Research and Testing (BAM), E Cziesielski, Technical University Berlin, Germany, U Schneider, Technical University Vienna, Austria</i>	17
Plan and initial results of the second SBI round robin test programme <i>Bart Sette, Ghent University, Belgium, R van Mierlo, TNO, The Netherlands, E Mikkola, VTT, Finland, C Lukas, Dow Chemical Co Ltd., UK, B Messerschmidt, Rockwool International, Denmark</i>	25
European reaction to fire performance of wood and timber products <i>Birgit Östman, Trätek, Swedish Institute for Wood Technology Research, Sweden, E Mikkola, VTT Building and Transport, Finland</i>	35
DYNAMICS	47
Relationship between heat and smoke release for the well-ventilated combustion of fuels <i>Archibald Tewarson, FM Global, USA</i>	49
Thermal spill plume studies for the design of smoke control systems <i>Roger Harrison, FRS, BRE, UK, M Spearpoint, University of Canterbury, New Zealand</i>	61
Interpretation of small and medium scale experiments with an enclosed burner fire <i>Andrei Chamchine, G Makhviladze, A Snegirev, T Graham, University of Central Lancashire, UK</i>	73
Over-pressure peaks and low-pressure peaks during compartment fire tests in forced ventilated configuration <i>Hugues Prétrel, W Le Saux, Y Pizzo, J Such, IRSN, France</i>	83
Study on effect of opening location on the occurrence of backdraft <i>Wenguo Weng, W Fan, University of Science and Technology of China, PR China, Y Hasemi, Waseda University, Japan</i>	95

Wall-vent compartment fire behavior under limited ventilation <i>Yunyong Utiskul, J Quintiere, University of Maryland, USA, T Naruse, Building Research Institute, Japan</i>	105
Fuel regression rates of hydrocarbon pool fires in crosswinds <i>Cecilia Lam, E Randsalu, E Weckman, University of Waterloo, Canada, A Brown, W Gill, L Gritz, Sandia National Laboratories, USA</i>	117
Fires in reduced oxygen conditions <i>Peter Fardell, D Purser, J Purser, N Marshall, P Clark, FRS, BRE, UK</i>	129
The prediction of water coverage on LPG storage tanks protected by a water deluge <i>Gareth Davies, P Nolan, London South Bank University, UK</i>	143
STRUCTURES	155
Behaviour of cellular steel beams in fire <i>Timothy Liu, Tenos Ltd, UK, K H Liew, Malaysia</i>	157
Experimental characterization of the effect of charring on the residual load carrying capacity of a structural fibre reinforced composite <i>José Torero, The University of Edinburgh, UK, D Hill, Rimkus Consulting Group Inc, USA</i>	169
Measurement of the thermal properties at high temperature <i>Robert Jansson, SP Fire Technology, Sweden</i>	181
Spalling of concrete for tunnels <i>Robert Jansson, L Boström, SP Fire Technology, Sweden</i>	189
Computer modeling and fire tests used to verify fire resistance of various wall assemblies <i>Jeffrey Maddox, D Gemeny, Rolf Jensen & Associates, USA</i>	199
Fire performance of columns in fire conditions <i>Neal Butterworth, Buro Happold, F Block, University of Sheffield, UK</i>	207
A comparison of heat exposure in fire resistance test furnaces controlled by plate thermometers and by shielded thermocouples <i>Mohamed Sultan, National Research Council of Canada, Canada</i>	219
HEAT TRANSFER	231
Structural response modelling of wood-joint floor assemblies exposed to fires <i>Noureddine Benichou, National Research Council of Canada, Canada</i>	233
Fire performance of partition assemblies <i>Samuel Manzello, R Gann, S Kukuck, K Prasad, W Jones, National Institute of Standards and Technology, USA</i>	245
Predicting the performance of drywall construction exposed to design fires <i>Hans Gerlich, Winstone Wallboards, C Barnett, D McLellan, Macdonald Barnett Partners Ltd, A Buchanan, University of Canterbury, New Zealand</i>	257
Total heat flux cannot be measured <i>Ulf Wickström, I Wetterlund, SP Swedish National Testing and Research Institute, Sweden</i>	269

Flame heat transfer in commodity classification fire tests <i>Peter Wu, J Chaffee, John deRis, FM Global, USA</i>	277
Radiative impact of wind-blown fires <i>Alexander Snegirev, G Makhviladze, University of Central Lancashire, J Marsden, Greater Manchester County Fire Service, UK</i>	289
RISK	301
A review of fire risk assessment methods <i>David Charters, Arup Fire, UK</i>	303
Property loss in structural fires in Finland <i>Olavi Keski-Rahkonen, K Tillander, VTT Building and Transport, Finland</i>	313
Environmental concerns of fires: Facts, figures, questions and new challenges for the future <i>Guy Marlair, INERIS, France, M Simonson, SP Swedish National Testing and Research Institute, Sweden, R Gann, National Institute of Standards and Technology, USA</i>	325
The costs and benefits of residential sprinkler systems <i>Jeremy Fraser-Mitchell, FRS, BRE, UK</i>	339
EVACUATION	351
The representation of occupant sensitivity to irritant fire gases within evacuation analysis <i>Ed Galea, S Gwynne, P Lawrence, Z Wang, University of Greenwich, UK</i>	353
Fire and evacuation risk assessment for passenger ships <i>Erik Vanem, R Skjong, DNV Research, Norway</i>	365
The basis for egress provisions in US building codes <i>Richard Bukowski, E Kuligowski, NIST, USA</i>	375
A general, computationally intelligent model for egress simulation <i>Richard Holden, A Cangelosi, University of Plymouth, UK</i>	387
PERFORMANCE BASED CODES	399
A process validation methodology for the use of fire safety engineering <i>Martin Shipp, FRS, BRE, UK</i>	401
The role of “redundancy” in performance-based fire safety regulation <i>Vincent Brannigan, University of Maryland, USA, A Kilpatrick, Glasgow Caledonian University, UK</i>	413
Egress provisions and the Dutch Buildings Decree <i>Peter van de Leur, DGMR Consulting Engineers, E Janse, Lichtveld Buis & Partners Consulting Engineers, The Netherlands</i>	425
Fire loads and design fires for commercial buildings <i>George Hadjisophocleous, E Zalok, Carleton University, Canada</i>	435
Building separation calculations revisited using advanced fire models <i>Richard Chitty, S Kumar, FRS, BRE, UK</i>	447
Fire engineering, setting the baseline <i>Alan Tyldesley, Health and Safety Executive, UK</i>	459

POSTERS	465
DYNAMICS	467
Experimental analysis of storage fires for a better understanding of warehouse fires <i>Stéphanie Patej, L Fournier, A Carrau, INERIS, France</i>	469
Characterisation of creeping flame over PMMA in narrow channel <i>Bogdan Dlugogorski, H Wang, J Hicks, B Moghtaderi, E Kennedy, The University of Newcastle, Australia, M Delichatsios, FireSERT, The University of Ulster, UK.....</i>	475
The behaviour of lining fires in rooms <i>M Akasha Azhakesan, FireSERT, University of Ulster, UK, J Quintiere, University of Maryland, USA</i>	485
The width effect in upward flame spread modelling <i>Kuang-Chung Tsai, F-S Wan, National Kaohsiung First University of Science and Technology, Taiwan</i>	497
Pallet and wood storage fires <i>Peter van de Leur, DGMR Consulting Engineers, S Öhlin Lostetter, TNO Centre for Fire Research, The Netherlands.....</i>	503
Heat release rate of objects burning in compartments <i>Richard Lyon, D Blake, Federal Aviation Administration, USA</i>	509
HARMONISATION.....	515
Experimental and numerical study of the influence of the forced extraction rate on the SBI test <i>Bart Merci, B Claes, E Theuns, B Sette, P Vandeveld, Ghent University, Belgium</i>	517
PERFORMANCE BASED-CODES.....	523
Fire safety of wooden buildings in urban areas <i>Per Jostein Hovde, H Landrø, Norwegian University of Science and Technology (NTNU), Norway</i>	525
Towards the development of design fires for residential buildings: Literature review and survey results of fire loads in Canadian homes <i>Mohamed Sultan, A Bwalya, N Bénichou, National Research Council of Canada, Canada</i>	531
The maritime experience in introducing “Alternative fire safety design” regulation <i>Guillaume Chantelauve, Bureau Veritas, France</i>	537
RISK	543
Cluster analysis of fatal fires <i>Stefan Särqvist, Swedish Rescue Services Agency, Sweden</i>	545
Explosion safety engineering: Guidelines for venting of deflagrations in enclosures with inertial vent covers <i>Vladimir Molkov, R Eber, A Grigorash, University of Ulster, UK.....</i>	551
Urban/wildland fires: Ignition by embers <i>Samuel Manzello, T Cleary, J Yang, National Institute of Standards and Technology, USA.....</i>	557

Fire safety engineering and chemical process industry <i>Jerzy Respondek, Sicherheitsinstitut, Switzerland</i>	563
The incorporation of fire test data in a risk-based assessment of hydraulic fluid fire resistance <i>Stuart Jagger, A Nicol, A Thyer, Health & Safety Laboratory, J Sawyer, Health and Safety Executive, UK</i>	569
An experimental investigation of heavy gas dispersion from the safety relief tube near the ground <i>Yu Shebeko, I Bolodian, V Malkin, D Gordienko, A Mindlin, All Russian Scientific Research Institute for Fire Protection, Russia</i>	577
STRUCTURES	583
National fire regulations limit the use of wood products in buildings in different countries <i>Birgit Östman, D Rydholm, Trätek, Sweden</i>	585
The temperature diffusion in the one side heating construction <i>Kestutis Lukošius, V Kaziliunas, Fire Research Centre, Lithuania</i>	591
Venting in fire rated wooden construction <i>Geir Jensen, Fire Safe and Simple, H Landrø, The Wood Center, T Log, Stord/Haugesund University College, V Stenstad, Norwegian Building Research Institute, B Vik, BA8 Consulting Engineers Ltd, O Jørgen Bragstad, Student - Norwegian University of Science and Technology, Norway, Philip Grimwood, Sealmaster, UK</i>	597
Failure of floor assemblies constructed with timber joists, wood trusses or i-joists during fire resistance tests <i>Leslie Richardson, Forintek Canada Corp, Canada</i>	603
The performance of passive fire protection in a large-scale natural fire test <i>Tom Lennon, FRS, BRE, K Hart, CAFCO International, UK</i>	609
DETECTION	615
Assessing sprinkler actuation on high ceilings <i>Soonil Nam, FM Global Research, USA</i>	617
Design fire size for fire safety systems that utilise fast or standard response <i>Phil Clark, D Smith, FRS, BRE, UK</i>	623
FIRE BEHAVIOUR OF MATERIALS	629
Evaluation of toxicants for materials used in military vehicles and equipment <i>Yannick Le Tallec, LNE, France, D Smith, BRE/FRS, J Hunter, QinetiQ, UK, F Groeneveld, TNO, The Netherlands</i>	631
Isocyanates in fire smoke <i>Tommy Hertzberg, P Blomqvist, SP Swedish National Testing and Research Institute, M Dalene, G Skarping, Stockholm University, Sweden</i>	639
Dangers related to fires in carbon fibre based composite material <i>Tommy Hertzberg, SP Swedish National Testing and Research Institute, Sweden</i>	645
Investigation of air gap distribution in protective clothing systems <i>Il Young Kim, C Lee, B Corner, US Army, RDECOM, USA</i>	651

COMPUTER MODELLING	657
Group solvers: A means of reducing run-times and memory overheads for CFD based fire simulation software <i>N Hurst-Clark, J Ewer, A Grandison, E Galea, University of Greenwich, UK.....</i>	659
Predicting hydrogen chloride concentrations in fire enclosures using a deposition model linked to field fire models <i>Z Wang, F Jia, E Galea, J Ewer, University of Greenwich, UK.....</i>	665
Modelling smoke obscuration in the ISO 9705 room <i>Colleen Wade, P Collier, BRANZ Ltd, New Zealand</i>	671
Validation and uncertainty analysis of numerical simulations of heat flux to a calorimeter in a 2-meter JP-8 pool fire <i>Anay Luketa-Hanlin, T Blanchat, Sandia National Laboratories, USA</i>	677
Characterization of a high momentum turbulent jet flame, a comparative study <i>Leiv Anfin Drange, Z Kazemi, T Log, Stord/Haugesund University College, B Magnussen, Computational Industry Technologies, Norway</i>	683
Integral level validation and accreditation of multiple-physics codes for computational fire simulations <i>Elizabeth Weckman, University of Waterloo, Canada, A Brown, G Evans, W Gill, V Figueroa, Sandia National Laboratories, USA.....</i>	691
Visibility through inhomogeneous smoke using CFD <i>Bjarne Paulsen Husted, Danish Institute of Fire and Security Technology, Denmark, J Carlsson, Swedish Defense Research Agency, U Göransson, Lund University, Sweden</i>	697
Progress on CFD modeling of fire suppression by water mist <i>Yehuda Sinai, C Staples, P Stopford, ANSYS Europe Ltd, M Edwards, A Hooper, MoD, UK.....</i>	703
Determinate-probability model of predicting forest fire danger using GIS ArcView <i>Alexander Filkov, A Grishin, Tomsk State University, Russia.....</i>	709
INVESTIGATION.....	717
Fire analysis tool – revisited acoustic soot agglomeration in residential smoke alarms <i>Kathryn Kennedy, G Gorbett, P Kennedy, John A. Kennedy & Associates, USA</i>	719
Outgassing phenomenon in flash point testing for fire safety evaluation <i>Gregory Gorbett, C Kennedy, K Kennedy, P Kennedy, John A. Kennedy & Associates, USA.....</i>	725
Failure analysis of brass connectors exposed to fire <i>Elizabeth Buc, D Hoffmann, Safety Engineering Labs., J Finch, MASCO Corporation, USA.....</i>	731
SUPPRESSION.....	741
The efficacy of water mist fire suppression systems for archive protection <i>Eric Marchant, Edinburgh Fire Consultants, UK</i>	743

EVACUATION	747
Numerical studies on evacuation design in the airport terminals Candy Ng, W Chow, The Hong Kong Polytechnic University, China	749
The simulation of fire and evacuation at sea <i>Ed Galea, A Grandison, L Filippidis, S Gwynne, J Ewer, P Lawrence,</i> <i>University of Greenwich, UK</i>	755
Limits to locality in cellular automata models of pedestrian behaviour <i>Richard Holden, A Cangelosi, University of Plymouth, UK</i>	761
Evacuation of a multi-level office building: Comparison of predicted results using an agent-based model with measured data <i>Nick Waterson, A Mecca and J Wall, Mott MacDonald Limited, UK</i>	767
COMBUSTION	773
The effect of oxygen concentration on co yields in fires <i>Guy Marlair, J Bertrand, INERIS, France, S Brohez, C Delvosalle,</i> <i>Faculté Polytechnique de Mons, Belgium</i>	775
The development of toxic gas yield in a format suitable for evacuation modelling <i>James Robinson, F Samson, B-A Sultan, Borealis, Belgium</i>	781
Evaluation of the combustion and thermal radiation modelling methods for fuel- and ventilation- controlled compartment fires <i>Suresh Kumar, FRS, BRE, UK, J Hua, J Wang, K Kumar, Institute of</i> <i>High Performance Computing, Singapore</i>	787
Methods for estimation of capability of mechanical sparks to ignite gaseous mixtures <i>Yu Shebeko, V Navtsenya, E Zamyshevsky, All Russian Scientific</i> <i>Research Institute for Fire Protection, Russia</i>	795
TUNNELS	801
A fire engineering design for new and existing subway stations <i>Rainer Könnecke, V Schneider, I.S.T. Integrierte Sicherheits-Technik, Germany</i>	803
Six technical databases addressing fire safety in tunnels: A major deliverable of the fit European thematic network <i>Yves Martin, J Van Dessel, Belgium Building Research Institute (BBRI),</i> <i>Belgium, G Marlair, INERIS, France</i>	809
The influence of longitudinal ventilation and tunnel size on HGV fires in tunnels <i>Richard Carvel, A Beard, P Jowitt, Heriot-Watt University, UK</i>	815
Computer modelling to assess the benefits of road tunnel fire safety measures <i>Stewart Miles, S Kumar, FRS, BRE, UK</i>	821
PROTECTION OF HISTORIC BUILDINGS	827
Fire protection of two museums in historic buildings in The Netherlands <i>J Koudijs, P van de Leur, DGMR Consulting Engineers, The Netherlands</i>	829
Fire protection of Røros – a historic town on the UNESCO world heritage list <i>Anne Steen-Hansen, Norwegian University of Science and Technology (NTNU),</i> <i>G Jensen, Interconsult, R Wighus, T Steiro SINTEF, Norway</i>	835
Author Index	841

TABLE OF CONTENTS

Volume 2

	Page no.
<i>Preface</i>	iii
<i>Co-organising and Programme Committee</i>	iv
DETECTION	845
A new methodology to evaluate the performance of total compartment water mist and water spray systems <i>Tommy Hertzberg, M Arvidson, SP Swedish National Testing and Research Institute, Sweden</i>	847
Investigation into the use of fine water mist for protection of plastic fume exhaust ductwork against fire <i>Alastair Brown, Rushbrook Consultants, UK, H van Nieuwburg, Philips Semiconductors, The Netherlands</i>	857
Determination of activation temperature of glass bulb sprinklers using a thermal liquid bath <i>Mohammed Khan, J Chaffee, FM Global, USA</i>	871
Performance based heat detector spacing <i>Soonil Nam, FM Global Research, USA</i>	883
FIRE BEHAVIOUR OF MATERIALS	893
Generalizing flammability of materials <i>Joseph Panagiotou, J Quintiere, University of Maryland, USA</i>	895
Burning behaviour of upholstered furniture <i>Charles Fleischmann, University of Canterbury, New Zealand, G Hill, Powell Fenwick Consulting Ltd., New Zealand</i>	907
Flammability characteristics at applied heat flux levels up to 200 kW/m ² : Time to ignition and mass loss flux <i>Patricia Beaulieu, R Alpert, FM Global, N Dembsey, Worcester Polytechnic Institute, USA</i>	917
Application of a methodology to predict room-scale fire performance from bench-scale testing <i>Jason Huczek, M Janssens, Southwest Research Institute (SwRI), USA</i>	929
A progress report on numerical modeling of experimental polymer melt flow behavior <i>Kathryn Butler, T Ohlemiller, G Linteris, National Institute of Standards and Technology, USA</i>	937
HRR of vertical combustibles inside a confinement: An analytical approach to the fire of electrical cabinets <i>Laurence Rigollet, S Melis, IRSN, France</i>	949
The role of self-heating in the estimation of kinetic constants for thermally unstable materials using differential scanning calorimetry (dsc) <i>Brian Gray, Firehusk Pty Ltd, C Macaskill, University of Sydney, Australia</i>	961

External heating of electric cables: numerical simulation and autoignition investigation <i>Jean-Pierre Vantelon, J-P Garo, ENSMA, University of Poitiers, E Thibert, B Gautier, EDF, France</i>	973
THE WORLD TRADE CENTRE COLLAPSE	985
Predicting fire exposures to structures – a review of the state of the art <i>Morgan Hurley, Society of Fire Protection Engineers, USA</i>	987
Simulating the fires in the World Trade Center <i>Kevin McGrattan, C Bouldin, National Institute of Standards and Technology, USA</i>	999
A predicted timeline of failure for the WTC Towers <i>James Quintiere, University of Maryland, USA</i>	1009
Robust design of tall buildings in fire – the use of analysis for structural fire engineering solutions <i>Barbara Lane, S Lamont, Arup Fire, A Usmani, J Torero, G Flint, A Jowsey, University of Edinburgh, UK</i>	1023
FIRE SERVICE	1025
Investigating fire fighting tactics in a mechanical workshop <i>Stefan Svensson, Swedish Rescue Services Agency, Sweden</i>	1027
A study on the brand spotting in urban fires - LES analysis on the scattering of square disks in a turbulent boundary layer <i>Keisuke Himoto, T Maruyama, T Tanaka, Kyoto University, Japan</i>	1039
Analysing the time to untenable conditions for the CESARE-risk computer fire model <i>A Hasofer, J Qu, I Thomas, CESARE, Victoria University of Technology, Australia</i>	1051
Physics-based modeling of community fires <i>David Evans, R Rehm, E Baker, National Institute of Standards and Technology, E McPherson, Pacific Southwest Forest Service Research Station, J Wallace, University of Nevada-Reno, USA</i>	1065
INVESTIGATION	1077
Advanced tools for use in forensic fire scene investigation, reconstruction and documentation <i>John DeHaan, Fire-Ex Forensics, USA</i>	1079
Flashover and fire analysis – a discussion of the practical use of flashover analysis in fire investigations <i>Patrick Kennedy, K Kennedy, John A. Kennedy and Associates, USA</i>	1101
Reconstruction of the fire in “de Hemel” in Volendam, New Years Eve 2000/2001 <i>Peter van de Leur, DGMR Consulting Engineers, S Öhlin Lostetter, P Reijman, TNO Centre for Fire Research, The Netherlands</i>	1115
Fire spread through a room with polyurethane foam covered walls <i>William Grosshandler, D Madrzykowski, N Bryner, D Stroup, National Institute of Standards and Technology, USA</i>	1127

Fire and life safety assessment of US egress and sprinkler requirements within nightclubs - a preliminary update <i>Jeffrey Tubbs, B Meacham, A Moore, B McLaughlin, M Johann, A Woodward, Arup Fire, USA</i>	1139
Charring rate of wood as a tool for fire investigations <i>Vytenis Babrauskas, Fire Science and Technology, USA</i>	1155
Fire and explosion in an automobile paint drying oven <i>Keith Moodie, Health and Safety Laboratory, UK, J Venart, University of New Brunswick, Canada</i>	1171
Estimating the performance of enclosure fire models by correlating forensic evidence of accidental fires <i>A Fernandez-Pello, G Rein, A Bar-Ilan, University of California, N Alvares, Fire Sciences Applications, USA</i>	1183
CFD fire simulation of the Swissair flight 111 in-flight fire <i>F Jia, M Patel, E Galea, University of Greenwich, UK</i>	1195
Fire investigation using CFD: Simulations of a fire in a discotheque <i>Ricky Carvel, J Lygate, International Fire Investigators & Consultants, UK</i>	1207
COMPUTER MODELLING	1219
Numerical and experimental investigation of flame spread over a PMMA surface <i>Jianping Zhang, S Ferraris, S Dembele, J Wen, Kingston University, UK, U Göransson, P Petersson, G Holmstedt, Lund Institute of Technology, Sweden</i>	1221
Mixing and turbulent transport in unconfined and impinging plumes <i>André Marshall, X Yao, T Ma, A Trouvé, University of Maryland, USA</i>	1233
Influence of solid material properties on numerical large scale flame spread calculations <i>Erwin Theuns, B Merci, J Vierendeels, P Vandeveld, Ghent University, Belgium</i>	1245
Numerical simulation of decomposition and combustion of organic materials <i>Ken Erickson, V Nicolette, Sandia National Laboratories, USA, B Vembe, Computational Industry Technologies AS, Norway</i>	1257
Establishing the credibility of results from modeled time and length scales in fires <i>Louis Gritzo, S Tieszen, M Pilch, Sandia National Laboratories, USA</i>	1269
Validation of FDS v4 boundary heat flux predictions for a corner fire <i>Jason Floyd, B Lattimer, Hughes Associates, USA</i>	1281
A new approach to the simulation of gaseous combustion and its application to several test fire scenarios <i>Jianwen Zhang, University of Greenwich, UK and Beijing University of Chemical Technology, China, F Jia, E Galea, J Ewer, University of Greenwich, UK</i>	1293
Validation of a field model for liquid spills <i>Javier Trelles, A Kelly, B Lattimer, Hughes Associates, USA</i>	1305
3D simulation of industrial hall in case of fire - Benchmark between ABAQUS, ANSYS and SAFIR <i>O Vassart, L Cajot, Profilarbed Research, Luxembourg, M O'Connor, Y Shenkai, Corus UK Ltd, UK, C Fraud, B Zhao, CTICM, France, J de la Quintana, J Martinez de Aragon, Fundacion Labein, Spain, J Franssen, F Gens, University of Liège, Belgium</i>	1315

An assessment of fire growth models - Branzfire and FDS against CSIRO fire tests on combustible linings in a room <i>Vivek Apte, A Bui, B Paroz, A Webb, V Dowling, CSIRO, Australia, C Wade, BRANZ, New Zealand</i>	1325
Comparison of the zone model OZone with natural fire tests in large deep compartment <i>Jean-François Cadorin, University of Liege, Belgium</i>	1337
A coupled CFD-FEA study of a tunnel structure exposed to fire <i>J Fellingner, Y Kenyon, A Breunese, A Lemaire, TNO Centre for Fire Research, The Netherlands, I Barry, IEB Consulting Ltd, UK</i>	1349
Performance assessment of external structure protection by CFD <i>Daniel Joyeux, P Van Hulle, S Desanghere, CTICM, France</i>	1361
SMALL SCALE TESTING	1373
The new Japanese building regulations and the new test methods <i>Shinichi Sugahara, Tokyo University of Science, Japan</i>	1375
Fire performance of personal computers and fire hazard in a home and in a small office <i>Marcelo Hirschler, GBH International, USA</i>	1383
Using the cone calorimeter for screening and control testing of fire retarded treated wood products <i>Bjarne Kristoffersen, A Steen-Hansen, Norwegian Fire Research Laboratory, SINTEF, Norway</i>	1397
Screening of plenum cables using a small-scale fire test protocol <i>Robert Bill Jr, M Khan, R Alpert, FM Global, USA</i>	1409
On the use of bench-scale smoke toxicity data in fire hazard and risk assessment <i>Richard Gann, National Institute of Standards and Technology, USA</i>	1421
Surface temperature measurements in the cone calorimeter using phosphorescence <i>Ulf Göransson, A Omrane, Lund University, Sweden</i>	1431
COMBUSTION	1443
Measurement of soot yield from JP-8 pool fires using light extinction <i>Kirk Jensen, A Brown, Sandia National Laboratories, USA</i>	1445
Particles from fire: Evaluation of the particulate fraction in fire effluents using the cone calorimeter <i>Yannick Le Tallec, L Saragoza, Laboratoire National d'Essais, France, T Hertzberg, P Blomqvist, SP Swedish National Testing and Research Institute, Sweden</i>	1455
The environmental effect of furniture <i>Petra Andersson, P Blomqvist, L Rosell, M Simonson, SP Fire Technology, H Stripple, IVL, Sweden</i>	1467
A model for the scenario-related assessment of the smoke toxic potency <i>Björn Bansemer, F-W Wittbecker, University of Wuppertal, Germany</i>	1479

TUNNELS	1491
Salt water experiments and simple model for investigating tunnel fire dynamics <i>Antoine Mos, P Carlotti, Centre d'Études des Tunnels, B Gay, Université Claude Bernard Lyon I, France, G Hunt, Imperial College London, UK</i>	1493
An analysis of conditions resulting from fires during tunnel boring operations <i>Frederick Mowrer, J deJoseph, University of Maryland, USA, M Johansson, Lund University, Sweden</i>	1505
Fire in road tunnels and life safety: Lessons to be learnt from minor accidents <i>Xavier Bodart, Consultant, Guy Marlair, INERIS, France, R Carvel, Heriot-Watt University, UK</i>	1517
Fires in heavy goods vehicle (HGV) cargos in tunnels <i>Anders Lönnermark, H Ingason, SP Swedish National Testing and Research Institute, Sweden</i>	1529
Verification of fire safety of the MarktMaas-tunnel with full-scale fire tests <i>Victor Meeussen, TNO Center for Fire Research, The Netherlands</i>	1541
Asphalt ignition in case of fire in civil engineering structures: Chemical analysis <i>Albert Noumowe, University of Cergy-Pontoise, France</i>	1551
TRANSPORT	1561
Fire safety background for Japanese underground railway systems and field experiments on the smoke movement in subway stations <i>Yuji Hasemi, S Moriyama, D-g Nam, S Tanaka, N Okazawa, W Ding, Waseda University, Japan</i>	1563
Fire safety management on the railways <i>Jaime Santos-Reyes, A Beard, Heriot-Watt University, UK</i>	1575
Development of a method to assess the fire hazard of automotive materials <i>Marc Janssens, K Battipaglia, J Huczek, M Miller, Southwest Research Institute, USA</i>	1587
The generic management system (GMS) approach to fire safety of composite materials <i>Oleg Sukovoy, C Kuo, University of Strathclyde, N Little, Intelligent Engineering Ltd, A Sharp, Lloyd's Register of Shipping EMEA, UK</i>	1597
An analysis of issues and solutions for the management of fire investigations at major incidents <i>Ronald Hopkins, Eastern Kentucky University, USA</i>	1609
Author Index	1617
